Builders

Lighting, displays and controls installed on rapid schedule, in unusual space

Power Solutions was contracted by David A. Nice Builders to install a specialized lighting system at a Zara retail store in the Fashion Centre at Pentagon City near Washington, DC.

We worked with Zara's own European installation crews to create display millwork and fixtures, smoothly managing differences in measurements (imperial versus metric) and European electrical equipment to complete the project in just two weeks.

Power Solutions has since installed systems for the Zara store at Tyson's Corner in McLean, VA, and has been contracted for eight more of its U.S. retail stores.
