

## Communications/Voice/Data

### **Voice/Data/Fiber Optics Services**

For today's businesses, distribution of information is a necessity, whether transmitted by voice, data or fiber optics cabling. Power Solutions is committed to providing a reliable and flexible data and telecommunications cabling infrastructure system that will deliver data over a variety of transmission technologies.

### **Structured Cabling Design & Installation Services**

Power Solutions brings to the table the service expertise and experience necessary to successfully implement structured cabling, voice, data and fiber optic telecommunication system design and installation. Planning for current and future needs, we craft systems that optimize our clients' voice and data infrastructure investments.

### **Telecommunications Infrastructure & Riser Backbone Systems**

Telecommunications infrastructure and riser backbone systems are the key components of any building's communications and IT capability. A professional riser management system is the single most important way to ensure that building tenants are getting the most from their voice and data telecommunications systems from the carriers they use.

Our riser management services program includes:

- Assessment of the telecom infrastructure and systems

- Plan development to address system requirements

- Development of a current database of circuit information (a critical tool for asset management and disaster recovery), and backbone and riser installation

### **Capabilities**

- Category 5e, 6, 6A Cabling

- Fiber

- RG6 & RG11 Co-Axial Cabling

- Inside / Outside Plant Cabling

- Fusion Splicing
