

Control Wiring

Building Management Systems

Today's world has created the need to find more energy efficient ways to operate buildings and reduce PUE. The installation of Building Management Systems is providing a pathway to reduce operating costs by maximizing the efficiencies of the mechanical and electrical systems. Power Solutions has partnered with the leading BMS Technology vendors to provide top quality, timely system installations.

Award Winning Installation Services

Power Solutions has a broad knowledge of the installation of BMS/BAS systems ranging from shell and tenant installations to mission critical systems. Installations are well thought out and planned to provide a clean and professional look with a focus on details. Several installations have received Craftsmanship Awards from the Washington Building Congress.

Power Solutions has provided installations in both new and retrofit type solutions. Our skilled team of installers takes care to work within the customers' processes and requirements to keep systems running in "live" areas of their facilities. Quality and care are the hallmarks of our installation teams.

System Diversity

Power Solutions has provided the wiring and installation of a wide variety of BMS and EPMS systems and vendors. Installations have ranged from large heating and cooling plants to DX type systems to free-cooling type reclaim systems to laboratory systems. These systems have been installed in a wide range of facilities including office buildings, schools, hospitals, labs, industrial plants and mission critical data facilities.

Panel Building

Power Solutions builds control panels for all types of BMS/EPMS systems. The panel build team works with vendors to design and build functional panels to work well with their system and to improve the overall quality of the installation.
